

# Contracts and Reimbursement Management System

The client is one of the oldest and largest health care services companies in the US. One of its major business units provides software, services and consulting to hospitals, physician offices, imaging centers, home healthcare agencies and payers.

The client wanted OFS to develop comprehensive contracts management software to manage the entire contracting and reimbursement process. This software would facilitate payment monitoring for better claim denial management and monitoring for contract negotiation.

## Business Benefits:

- Helped payers and providers handle complex contract terms and accurately calculate expected reimbursements
- Helped maximize expected cash collections by tracking variance between actual and expected reimbursement

## Key Highlights

- Provided What-if analysis of contracts for better price negotiation
- Maintained claim and history files to assist with contract negotiation
- Helped denial and appeal analysis for reimbursement discrepancies
- Helped determine and report variance and allowed users to communicate effectively on their contract issues with payers
- Facilitated online claims submission
- Facilitated reimbursement process
- Helped in insurance claim submission through effective workflow
- Helped update data in different patient accounting systems

## Technologies

- VC++, Prolog, C#.NET, Windows server, MS-SQL server
