

Provider Dataset Match

The client is one of the nation's largest providers of release of information (ROI) services, audit management and tracking technology.

The client wanted OFS to develop the provider match software to update, validate and match the providers' (physicians, hospitals) information to increase data accuracy (address, phone number, location, hospital details) for accelerating business growth.

Business Benefits:

- OFS helped the client increase business revenue through data accuracy.
- OFS provided integration with other client products and added value to other product lines.

Key Highlights

- OFS completely owned the product development, including application architecture, design, development and testing.
- **Key Application Features:**
 - Builds, maintains and appends U.S. provider information from various sources like Salesforce and LexisNexis
 - Implemented automation in updating providers' information on a weekly basis
 - Matches a provider list to the providers associated with a practice where the client has ROI services
- Team of 7 (1 onsite and 6 offshore) developed and released this application to customers in 6 months.

Technologies

- Java, JavaScript, MyBatis, Guice, AngularJS, Bootstrap, HTML, CSS, Jersey, GSON, Jenkins, Grunt, Node.js, Maven, Shell Script, Active Directory, Oracle, Apache Tomcat, Linux, JIRA
